OPERATION MANUAL

UZI

Full Auto

"Get Yours Now Before They're Gone !"

Available off-the-shelf for immediate transfer.

If you have not had the pleasure of test-firing an UZI submachine gun, locate one and try it. You will find out why the slow, 600 rounds per minute firing rate makes the gun very controllable, and uses less ammunition. That saves you money in the long run!

The UZI has also been around long enough to be thoroughly battle-tested as one of the easiest-to-maintain and most reliable guns ever made. The simple design and tolerant specifications allow any grade of 9mm ammo to be used, from import Egyptian to hand loads. It just keeps rockin' and rollin'.

Our weapons are built using receivers produced and registered by Group Industries prior to the 1986 ban. We purchased the receivers at auction in August 1995 during the dissolution of Group Industries, and then searched the world over for new-condition parts necessary to assemble complete weapons. In late 1998, we found and imported parts produced by Lyttleton Engineering in South Africa, known to be the world's highest-quality UZI government contract manufacturer. We are now offering the new weapons for sale, along with many quality accessories. This website contains descriptions and pricing for all of our products.

SPECIFICATIONS:

FOLDED RECEIVER BLANK: produced, numbered and registered by Group Industries in Louisville, KY prior to the May 1986 ban. *Note: since it is the receiver that is registered, you can easily convert the caliber to .22 or .45 ACP by simply dropping in a different bolt and barrel, available in a conversion kit from us. No tools or modifications, and no paperwork!*

DRY WEIGHT: 9 lb.

LENGTH: 18.5 inches with stock folded, 25.75 inches with stock extended

RECEIVER FIXED PARTS MANUFACTURING AND ASSEMBLY: Vector Arms, Inc.

REPLACEABLE PARTS (PARTS KIT - 75 pieces): original UZI factory (Lyttleton), un-issued – new condition.

FINISH: parkerized - dark gray, almost black. (Military-issue UZIs are painted).

QUALITY: Our primary objective is to satisfy demanding customers – you – by producing a commercial quality gun that lasts over a lifetime, and not a lower-cost disposable military piece – as was the case with the original UZI. Extra attention goes into each piece in grinding and polishing welds and machining marks to create a beautiful cosmetic finish (not the case with original factory

UZIs). The receiver is then heat-treated to eliminate the wear caused by the bolt as it moves back and forth on the floor of the receiver. This ensures a long lasting, trouble-free investment, and imported receivers have never had this advantage. We claim our guns to be the finest UZIs ever produced, since they are the best of both worlds: a highly cosmetic, heat treated receiver coupled with UZI factory spec parts. The end result is an exceptional-looking gun that is extremely durable.

WARRANTY: We guarantee our quality of materials and workmanship for 12 months *and your complete satisfaction* or your money back. (We will replace any strippable parts by mail, the receiver must be transferred using a Form 2 back to our facility for repair or service. Warranty does not apply in cases of gross negligence or abuse).

PROJECT HISTORY: The international patents on the UZI expired some years ago. Group Industries of Louisville, KY had been doing conversions on UZIs for several years and was enthused about the reliability, simplicity, ease of maintenance and other advantages of the UZI. As a result, they decided to build an "all-American" version. They cloned the IMI UZI and got as far as the receiver stamping when the NFA ban was passed in May 1986. This occurred during the Reagan administration, and prohibited further importation and manufacture of full-auto weapons for public consumption. Any weapons – or in this case, weapon receivers – produced, numbered and registered prior to the ban were grandfathered.

Group Industries ran into financial difficulties in 1992, after several hundred of their UZIs had been successfully produced and sold. The remaining inventory was then sold at auction to clear debts in 1995. Vector Arms acquired the receivers to continue the project.

FULL-AUTO, TRANSFERABLE RECEIVER, UZI style SMG \$2,995 in stock now !
